Richmond Hill Resources Plc
(“Richmond Hill” or the “Company”)

Martello update

Richmond Hill Resources announces that its drilling programme at the Martello Gold Project has now been completed with cores having been sent to Winnipeg to be submitted for assaying. In aggregate 1,307 metres (“m”) of drilling was completed across seven holes.

Hole TB26-001 intersected an 84m Quartz Feldspar Porphyry (“QFP”) unit with high gold potential, highly silicified with colours ranging from dark grey to pale green. The interval from 104m to 156m contained sparse quartz veinlets bearing sulphides, with a notable 8cm quartz vein at 128.3m. Below the QFP, a medium-grained mafic intrusive (diorite) unit extended from 156m to 187.75m. Two brecciated and sheared carbonate veins bearing sulphides were observed in the lower mafic volcanic sequence and will be tested for gold potential.

Hole TB26-002 yielded significant mineralisation within the QFP unit with two QFP intercepts measuring 45.5m and 14m in thickness. Minor quartz veining with disseminated pyrite was observed throughout. The hole also intersected substantial brecciated quartz veining in sheared mafic volcanics, including a 22cm vein and 40cm vein with pyrite clots. Historical gold association with sheared mafic volcanics will be tested.

Hole TB26-003 reached target depth. Early drilling through the target interval at 101 metres encountered diorite with several fault zones but no QFP or significant veining intersected to date in this location.

Hole TB26-004 intercepted QFP from 114.5-122m, 126-129m and 134.75-136.25m. Drilling was shut down early due to intercepting relatively barren mafic volcanic rock.

Hole TB26-005 intercepted QFP from 28m to 64m: a 32m interception of the unit. One 15cm breccia vein was observed in the unit.

Hole TB26-006: the QFP unit ended at approximately 179.5m with a total thickness of 38.5m.

Hole TB26-007: QFP intersection from 130 to 156m with a thickness of 26m. Brecciated quartz vein from 156 to ~156.75m with sulphides.

Drilling Details

Hole ID	Pad	Azimuth	Dip	Target Depth (M)	Final Depth (M)	Status
TB26-001	1	260	80	175	200	Complete
TB26-002	1	215	70	200	200	Complete
TB26-003	2	60	70	200	200	Complete
TB26-004	3	240	70	200	176	Complete
TB26-005	3	20	75	125	125	Complete
TB26-006	4	260	75	200	200	Complete
TB26-007	4	210	80	200	206	Complete

Hamish Harris commented: "It's pleasing to have finished our maiden drilling campaign in good time and we look forward to receiving the assay results in the coming weeks."

Qualified Person

The technical information contained in this disclosure has been read and approved by Sheldon Modeland, P.Geo, a director of the Company and a current member of Association of Professional Geoscientists of Saskatchewan and acts as the Qualified Person under the AIM Rules - Note for Mining and Oil & Gas Companies.

This announcement contains inside information for the purposes of the UK Market Abuse Regulation and the Directors of the Company are responsible for the release of this announcement.
